News from the Stars:

OR, AN

EPHEMERIS

For the YEAR, 1704.

WITH
Observations upon the Eclipses, Solar
Ingresses and Configurations of Heaven,
happening therein.

Being the Bifextile, or Leap Year.

And from the Creation of the WORLD,
according to the best of History, 5653 years.

WHEREIN

You have an Account of many things about the
Heavenly Bodies, and their Portents in the
same YEAR.

By WILLIAM ANDREWS, Student
in Astrology.

Call enarrant gloriam Dei.

LONDON.

Printed by J. Wilde, for the Company of
STATIONERS, 1704.

To the Reader

IT may be very well known in all or most Parts of the World, what has happened not very long since at Rome, and in many Parts of its Territories, &c. by Great and Terrible Earthquakes at several Times, to the great Consternation of their Inhabitants; yea, some Thousands of People, (as it has been related) have thereby been destroyed, and many great and Eminent Churches, Houses, and Buildings in those Parts of the World, &c.

Indeed, Earthquakes are many times of dreadful Consequence to the People and Places where they happen, as has been found by Experience. For altho, as the Learned M. Swan saith in his *Speculum Mundi*, page mihi 229. "The Earth was prepared and made a fit Habitation for Man to dwell on; yet, as if Man was not worthy always to tread upon such a solid Foundation, we see it often shakes, and quakes, and rocks and rends it self, as if it shewed that he which made it, threatened, by this Trembling, the Impiety of the World, and Ruine of those which dwell upon the Earth. For though the efficient, material, and formal Causes of an Earthquake be natural; yet the final is the Signification of an angry God, moved by the execrable Crimes of a wicked People; according to that of David in the 18th Psalm; at the 7th Verse, *The Earth trembled and quaked, the very Foundations of the Hills also shook, and were removed, because he was wroth.*

"Fear hills our Heares, what Heart can Fear dissemble,
"When Steeples stagger, and huge Mountains tremble.
"For if it be the Lord's Will, (as this Learned Man saith in another place, viz. page 238) by this Work of his in his Handmaid Nature, to shake it, no land can be sure, no Place so strong that can defend us. Nay, the more strong, the more dangerous, for the higher, the greater fall. Thus he—

I have given an Account herein, of the Dispositions of the Stars in the Year 1704. now approaching, and of their Significations accordingly —

WILLIAM ANDREWS.

4	Epact.	24
26	Number of Direction.	29

The Use of the Two ensuing Tyde-Tables.

TO find the time of Full Sea, or High Water in any of those Places mentioned in the two ensuing Tyde-Tables, you must observe, First, the Age of the Moon, which you may easily find in the next following Table, wherein you have the Moon's Age every day throughout this year, 1704. and having therein found out the Moon's Age, according to those Directions mentioned for that purpose in the side of the said Table; then have recourse unto the said Tyde-Tables, & look for the place desir'd in the Head of the said Tables, with the Age of the Moon, in the Column under the Title of the Moon's Age, and in the Common Angle or meeting of these Lines in the Column under your Place, you shall have the time of High Water and Full Tyde in hours and minutes.

Yet Note, That the Tydes do not always fall out exactly at the time found in these Tables, by reason of the Difference of the Moon's Latitude, High Winds, Land-Floods, &c. which do very often alter the Time; but this is the Common Rule, generally given, for the finding of them.

A TABLE of the Moon's Age every day throughout this Year, 1704. whereby, with the help of the ensuing Tyde-Tables, the time of High-water and full Tyde may be found in those Places there inserted.

Days.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.

January's Planetary Transactions, and Observations, 1704.

The { 2 day, at 10 before noon, *Saturn*
4 day, at 11 before noon, *Jupiter*,
21 day, about 11 before noon, *Mars*
22 day, at 4 in the morning, *Venus* } is with the S.
26 day, at 4 in the afternoon, *Mercury*
29 day, at 10 at night, *Saturn*
31 day, at 9 at night, *Jupiter*

Saturn, *Jupiter* and *Mercury* are Occidental, and Evening-Stars all this Month, and *Mars* and *Venus* are Oriental and Morning Stars.

It is probable, that some of the Effects of the late Eminent Eclipse of the Moon in December past, will now, or e'er long, be manifested in some parts of the World thereby concerned; and they may be of some unpleasant and various Importance. At the Beginning of this Year, and in this Month the Heavenly Bodies are thus disposed, viz. *Saturn* is in *Aries*, *Jupiter* in *Taurus*, *Mars* in *Sagittary*, and *Venus* also to the 26th. Day, and then She comes into *Capricorn*; and *Mercury* now passeth from *Capricorn* into *Aquarius*, and from thence into *Pisces*——— There's in this Month a Conjunction of the Sun and *Mercury* in *Capricorn*; a Trine Aspect of *Saturn* and *Venus*, and of *Saturn* and *Mars* in *Sagittary* and *Aries*, a Quartile of *Jupiter* and *Mercury*, and of the Sun and *Jupiter* in *Taurus* and *Aquarius*, a Sextile of *Venus* and *Mercury* and *Mars* and the Sun in *Sagittary* and *Aquarius*, and of the Sun and *Saturn* in *Aries* and *Aquarius*. Much Busineſs may now appear in sundry Parts of the World, of various Concernment; and some Difficulties still in the Affairs of some European Countries; and there may be many Reports abroad about the present Negotiations of some considerable Nations, but whether tending to Peace or War, Time will discover———

Cold, windy, sleety, or snowy Weather, at or about the Beginning of this Month, and also now and then afterwards therein.

February's

1704.

February hath xxix Days.

First Quarter, the 1 day, 40 minutes past 3 afternoon.

Full Moon, the 9 day, 15 minutes past 8 at night.

Last Quarter, the 17 day, about 7 in the morning.

New Moon, the 23 day, 16 minutes past 11 at night.

February's Planetary Transactions, and Observations, 1704.

The { 19 day, at 2 in the morning, Mars
20 day, at 6 at night, Venus
23 day, at 5 in the morning, Mercury } is with the ☾
26 day, about noon, Saturn
28 day, at 1 after noon, Jupiter

Saturn and Jupiter are still Occidental and Evening-Stars, and Mercury to the 18th. Day; and then He becomes Oriental and a Morning-Star. Mars and Venus continue still Oriental, and Morning-Stars.

Saturn continues still in Aries, and Jupiter in Taurus; and towards the Middle of this Month, Mars passes from Sagittary into Capricorn, and towards the Latter Part thereof Venus leaves Capricorn and comes into Aquarius; and Mercury becomes Retrograde in Pisces, and continues so therein all this Month. The Celestial Bodies are now moderately disposed, there being Five Sextile Aspects amongst them at this time, viz. Two of Jupiter and Mercury, and One of the Sun and Jupiter in Pisces and Taurus; the Two other are of Venus and Mercury, and of Mars and Mercury in Capricorn and Pisces; also, there is a Trine Aspect of Jupiter and Venus in Taurus and Capricorn, being all of favourable Significations, tho' of no very great Importance. — There is also now a Conjunction of the Sun and Mercury in Pisces, and a Quartile of Saturn and Venus in Aries and Capricorn. — Some Treaties, or Matters tending thereto, may be now a carrying on, or endeavoured to be promoted by some Present People concerned in War, who may now seem desirous of Peace and Quietness, tho' there may be some Martial Preparations and Undertakings at hand in some Places; and many Things relating unto Military Affairs, &c. —

Some High Winds, and Cold, Snowy, or very wet Weather now and then in this Month.

March

1704.

March hath xxxi Days.

First Quarter, the 2 day, about 1 in the afternoon.

Full Moon, the 10 day, about noon.

Last Quarter, the 17 day, 36 minutes past 2 in the after.

New Moon, the 24 day, 10 minutes past 11 before noon.

April's Planetary Transactions, and Observations, 1784.

The { 16 day, at 8 in the morning, Mars
20 day, at 9 in the morning, Venus
21 day, at 7 at night, Saturn } is with the
22 day, at 3 after noon Mercury
24 day, at 4 in the morning, Jupiter }

On the 5th. Day Saturn becomes Oriental and a Morning-Star; Jupiter still continues Occidental and an Evening-Star; Mars and Venus are Oriental and Morning-Stars still; and Mercury to the 26th. Day, then he becomes Occidental and an Evening-Star.

At the end of this Month, Jupiter finisheth his Course in Taurus, and proceeds to Gemini, and Saturn is upon his leaving of Aries for the present, and is drawing very near to Taurus; and now the Sun and Mercury come to Conjunction with him, in the very latter part of Aries. Mars continues in Aquarius all this Month; Venus removes from Pisces into Aries, and Mercury from Pisces into Aries, and so into Taurus. Mars and Mercury are now in a Sexile Aspect in Aries and Aquarius; and Jupiter and Venus in Taurus and Pisces; Mercury is in Conjunction with the Sun in Taurus; and in a Quarile Aspect, of Mars in Taurus and Aquarius. The Effects of the late Quadrature of Saturn and Mars in March past, and of some other Configurations of Heaven, &c. — may be now manifested in sundry Parts of the World; and if they prove of a kind Nature, will be well — France, Germany, Sweden, Denmark, Poland, the United Provinces, Holland, Zealand, &c. The East and West-Indies, and some other Places — may be (it is probable) sensible in some kind or other, at or about this Time, of some inquiet and unpleasant Portents of the Stars, &c. —

Much unsettled Weather sometimes, in this Month, East Winds; Many great Storms of Hail and Rain, with Thunder, &c. in some Places; and some cold cloudy Weather therein, if not some Snow.

May's

Full Moon, the 8 day, 30 minutes past 10 before noon.

Last Quarter, the 15 day, 21 minutes past 2 in the morn.

New Moon, the 22 day, about 1 in the afternoon.

First Quarter, the 30 day, 20 minutes past 4 in the after.

19 day at midnight, *Venus*. } is with the Moon.

Saturn, Jupiter, Mars, Venus, and Mercury, are Oriental and Morning Stars all this Month.

NOW *Mars* proceeds from *Pisces* into *Aries*, and there is at this time a *Trine Aspect* of the *Sun, Venus* and *Mercury* with *Him* in *Aries*, from *Leo*; for *Venus* now passes from *Cancer* into *Leo*; and *Mercury* becomes direct in motion in *Cancer*, and goes from thence to *Leo*; but before *Venus* and *Mercury* part from *Cancer*, they are (at the beginning of this month) in *Conjunction* therein. The *Sun, Venus, and Mercury*, as soon as they come into *Leo*, apply to a *Quartile Aspect* of *Saturn* in *Taurus*. The present Business and Designs of some *European Nations* may be of some Consequence; and some eminent Matters may be on foot in some Countries beyond the Seas — Many People may be sensible of Troubles and Disturbances, by Military Proceedings and Controversies; and Animosities may still appear in some Places; notwithstanding some peaceable Negotiations, which have been endeavoured to be carried on, and may be now promoted by some *European People*. *Poland*, and some Places under *Taurus* nearer hand, may be now concerned. And also the City of *Rome, Italy*, and some other Cities and Countries under *Leo*, &c. — It may be feared that the Small Pox, or violent Fevers, or some Pestilential Disease, may much afflict some People. and God grant that the *Plague* it self may not appear in some Places, &c. —

In this month, there will be now and then great showers of *Hail* and *Rain*, and tempestuous Weather, &c. in many Places —

Full Moon, the 4 day about 9 morning.

Last Quarter, the 11 day, 45 minutes past 6 morning.

New Moon, the 19 day 27 minutes past 10 before noon.

First Quarter, the 27 day, 30 minutes past 1 morning.

The { 7 day at 2 afternoon, *Mars*
 { 9 day at noon, *Saturn*
 { 13 day at 4 morning, *Jupiter* } is with the Moon
 { 19 day at 10 beforenoon, *Venus*
 { 20 day at 8 morning, *Mercury* }

Saturn, *Jupiter*, and *Mars*, are still *Oriental* and *Morning Stars*; and *Mercury* to the 9th day and *Venus* to the 21st day, and then they become *Occidental* and *Evening Stars*.

Saturn turns now *Retrograde* in the 6th degree of *Taurus*; and *Mars* too, near the 10th degree of *Arries*. *Venus* and *Mercury* now remove from *Leo* into *Virgo*; and *Mercury* goes from thence into *Libra*. The *Celestial Bodies* are much busied in *Mutual Aspects* in this Month; but they are such as are of mild Dispositions — The *Sun*, *Venus*, and *Mercury*, are in a *Sextile Aspect* unto *Jupiter* in *Gemini*, from *Leo*. *Mercury* is in *Conjunction* with *Venus*, and the *Sun*, before He leaves *Leo*, and *Venus* and the *Sun* are in *Conjunction* in *Virgo*. *Mercury*, *Venus*, and the *Sun*, are in a *Trine Aspect* to *Saturn* in *Taurus* from *Virgo*; and there is now a *Quartile Aspect* of *Mercury* and *Jupiter*, in *Virgo* and *Gemini* — Some *Treaties* may be now in hand in some Parts of *Europe*, for the reconciling of some National Differences; and the Publick Concerns of some Nations may be for the present in somewhat a more calm posture, than in some months past, and may be at this time managed pretty moderately — yet in those Places where Armies are, some Action of Importance may be drawing nigh; and various News may be abroad about the Affairs of *Poland*, and some other Foreign Countries —

Much unsettled Weather in this Month; many hasty Storms therein, with Thunder and Lightning in divers Places.

Full Moon, the 2 day, 44 minutes past 3 afternoon.

Last Quarter, the 9 day, a little past 8 at night.

New Moon, the 18 day, 48 minutes past 1 morning.

First Quarter, the 25 day, 18 minutes past 9 morning.

The { 3 day at 7 at night, *Mars*
 { 5 day at 8 at night, *Saturn*
 { 9 day at 5 at night, *Jupiter*
 { 18 day at 6 at night, *Venus*
 { 20 day at 4 morning, *Mercury*
 { 30 day at 5 at night, *Mars* } is with the Moon.

Saturn and *Jupiter* are still *Oriental* and *Morning Stars*; and *Mars* is a *Morning Star* to the 16th day, and then He becomes *Occidental* and an *Evening Star*: *Venus* and *Mercury* are *Occidental* and *Evening Stars* all this Month.

At the very latter end of this Month, *Mars*, by his *Retrograde Motion* goes back from *Aries* into *Pisces*; and *Venus* now proceeds from *Virgo* into *Libra*, and *Mercury* from *Libra* into *Scorpio*—Notwithstanding the amicable Condition of the Stars in *August* past, their Influence and Proceedings now are of another Temper: For this Month begins with an *Opposition* of *Mars* and *Mercury* in *Aries* and *Libra*; then follows an *Opposition* of *Venus* and *Mars* there too; and quickly after the Sun's Ingress into *Libra*, He applies from thence to an *Opposition* of *Mars* in *Aries* too; and *Saturn* and *Mercury* are in *Opposition* in *Taurus* and *Scorpio*, being all of turbulent and unkind significations; and there is no other mutual Aspects of the Planets besides in this Month. Some Obstructions or Debates may now happen in the Grand Affairs of some European Nations; and Troubles and Disturbances among some People under *Aries* and *Libra*; and some under *Taurus* and *Scorpio*, who may be now one way or other in some uneasy Circumstances. Martial Actions in some Places. Ill Weather at Sea, to the loss of some People. Many Robberies and Piracies committed. And some Countries Concerns may meet with some Difficulties.

Very great Winds in this month; and also some Thunder and Lightning in some Places, and great Hurricanes, or most violent Storms, &c. —

October

Of other Planetary Transitions and Observations.

The { 4 day at 3 morning, *Saturn*
 { 7 day at 3 morning, *Jupiter*
 { 17 day at 3 afternoon, *Mercury* } is with the Moon
 { 18 day at 10 at night, *Venus*
 { 27 day at midnight, *Mars*
 { 30 day at 8 morning, *Saturn*

Saturn is *Oriental*, and a *Morning Star* to the 15th day of this Month, and then becomes *Occidental*, and an *Evening Star*: *Jupiter* continues still *Oriental* and a *Morning Star*, and *Mars* and *Venus* are *Occidental* and *Evening Stars*; and so is *Mercury* to the 16th day, and then He becomes *Oriental*, and a *Morning Star*.

THE Effects of the disagreeing Aspects of the Planets in September past, and of some of this time, may be manifested now, or ere long, in those Parts of the World that are under the Constellations of Heaven by them concerned — *Jupiter* now becomes *Retrograde* in *Gemini*, and *Mars* direct in motion in *Pisces*: *Venus* passes from *Scorpio* into *Sagittary*; and *Mercury* comes by a *Retrograde Motion* from *Scorpio* back into *Libra*; and then He presently becomes direct in motion. The Configurations of the Planets now are these, viz. Oppositions of *Saturn*, *Venus*, *Mercury* and the Sun in *Taurus* and *Scorpio*; a Trine of the Sun and *Jupiter* in *Gemini* and *Libra*, and of *Mars* and *Venus* in *Pisces* and *Scorpio*, and a Conjunction of *Venus* and *Mercury*, and the Sun and *Mercury* in *Scorpio* — The Publick Business of some Countries may now stand somewhat dubiously. *Poland*, some of the *Turks* Dominions, and some other Foreign Places, may be in some uneasie and difficult Concernments; and some very considerable Matters may be in agitation in sundry Places of Europe, and near manifestation (in some Countries) relating unto National Affairs —

Much cold, frosty, or very wet Weather in this Month; and great Floods in some Places, &c. —

November

Last Quarter, the 8 day, a little past 2 afternoon.

the 16 day, near 6 in the morning.

First Quarter, the 22 day, 22 minutes past midnight.

the 30 day, 29 minutes past 7 morning.

30	S. Andrew Apostle.	19	35	22	1	Sun	sets, 3. 45:	

The { 3 day at 9 morning, *Jupiter*
 15 day at 1 morning, *Mercury*
 17 day at 11 at night, *Venus*
 24 day at 7 at night, *Mars*
 26 day at noon, *Saturn*
 30 day at 11 beforenoon, *Jupiter* } is with the Moon.

Saturn, Mars, and Venus, are Occidental and Evening Stars all this Month; and Jupiter and Mercury are Oriental and Morning Stars.

A Type of the Moon's Eclipse in this Month.

ON Thursday the 16th Day of this Month, between 5 and 6 of the Clock in the Morning, the Sun will be Eclipsed in the 5th degree of *Sagittary*, which will be seen in some very remote Parts of the World. And on Thursday Morning, the 30th day, the Moon will be Eclipsed in part in the 19th degree of *Gemini*, which (if the Air favour us) will be seen Here. 'Twill begin about a quar-

ter of an hour past 6 of the Clock in the Morning. The greatest Obscuracion will be about half an hour past 7, and the end somewhat above half an hour after 8. The Digres Eclipsed will be above 5, and the whole Duration of the Eclipse about 2 hours and an half. *Saturn*, by his Retrograde Motion, comes back now from *Taurus* into *Aries* again for a little time. *Mars* removes from *Pisces* to *Aries*, *Venus* from *Sagittary* into *Capricorn*, and *Mercury* from *Scorpio* into *Sagittary*. This Month begins with an Opposition of *Saturn* and *Mercury* in *Taurus* and *Scorpio*; and there is now an Opposition of *Jupiter* and *Venus*, in *Gemini* and *Sagittary*; a Trine of the Sun and *Mercury*, and *Mars* and *Mercury* in *Aries* and *Sagittary*; of *Saturn* and *Venus* in *Taurus* and *Capricorn*, and a Quartile of *Mars* and *Venus* in *Aries* and *Capricorn*. No great Certainty in some Mundane Affairs now. Some Controversies and Debates may be still depending between some European Nations, and Divisions and Animosities amongst some People

This Month will begin with cold, windy, wet, or snowy weather; and such weather will happen often therein.

1794

DECEMBER AIN XXI Days.

		23 day at 5 at night, <i>Saturn</i>		
		27 day at 11 beforenoon, <i>Jupiter</i>		

Saturn, Jupiter, Mars, and Venus, are now Occidental and Evening Stars to the Years end: Mercury is Oriental and a Morning Star to the 14th day of this Month, and then He becomes Occidental and an Evening Star too.

THE late *Lunar Eclipse* being but small, its Effects may be accordingly; and seeing that the Moon was in *Conjunction* with *Jupiter* at the time of her Eclipse, it seems thereby to have a mild signification — *Saturn* having gone back a few minutes into *Aries*, now becomes direct in motion there; but *Jupiter* is still *Retrograde* in *Gemini*. *Mars* continues in *Aries* all this Month. *Venus* now leaves *Capricorn*, and goeth into *Aquarius*; and *Mercury* removes from *Sagittary* into *Capricorn*, and from thence (at the Month's end) to *Aquarius*. The Heavenly Bodies are now thus disposed; viz. at the beginning of the Month, there's an *Opposition* of the Sun and *Jupiter*, and of *Jupiter* and *Mercury* in *Sagittary* and *Gemini*; and there is now a *Conjunction* of the Sun and *Mercury* in *Capricorn*, a *Quartile* of *Saturn* and *Venus*, and of *Mars* and *Mercury* in *Aries* and *Capricorn*; a *Trine* of the Sun and *Saturn*, and of *Saturn* and *Mercury* in *Aries* and *Sagittary*; of *Jupiter* and *Venus* in *Gemini* and *Aquarius*, and a *Sextile* of *Jupiter* and *Mars* in *Aries* and *Gemini* — The Portents of the Stars at this time seem to be of a pretty calm Nature, and moderate for the most part: And no great Action now; tho' some Inconveniences and Troubles may still attend some Countries —

Very cold, windy, stormy, wet or snowy; Weather very often in this month.

Astral Observations and Predictions, for the Year, 1704.

By William Andrewes, Student in Astrology.

Sed regit Astra Deus.

Shall (God assisting) begin this my present *Astrologia*
Discourse for this Year, 1704. with some Observations on
the Position of Heaven, at the Sun's Ingress into Capricorn, on
Saturday the 11th day of December, 1703. and the Config-
urations of the Stars attending it; together also, on the great
and Eminent Eclipse of the Moon, happening the very next
morning after the said Ingress; esteeming the Consideration
hereof, and its Signification to be of some Moment.

B

As

Astral Observations, 1704.

At the aforesaid Ingress of the Sun into Capricorn, the Heavenly Bodies are thus posited; viz. The second Degree of Pisces ascends in our Horizon; and the 19th Degree of Sagittary is on the Cusps of the Medium Cœli: Saturn is almost in the 16th Degree of Aries in the Ascendant, stationary unto Direction; Jupiter is in the Second House of Heaven, in the 11th Degree of Taurus retrograde. Mars and Venus are in the 8th House, not far asunder, Mars being in the 17th Degree of Scorpio, and Venus in the 19th Degree. The Sun is in Conjunction with Cauda Draconis in the 11th House. Mercury is in the 9th House in the 17th Degree of Sagittary. And the Moon is in the 4th House, in the 21st Degree of Gemini; having been not long before the said Ingress in Opposition with Mercury, and is after the same void of Course.

What is most to be disliked at this Solar Ingress, (if the aforesaid time thereof be exact) is, the Position of Saturn in the Ascendant, as having an unpleasant Signification therein; for he doth thereby seem to import, that the Commonalty of some Nations will be in some melancholy circumstances, and that great Colds, Coughs, Agues, and other Infirmities of this Nature, will appear much among some People; and also Poverty, or Loss, or Misfortunes in some of their greater sort of cattle; in some places in the Months of January and February this Year 1704. Besides, as the Planet Mars is posited in the 8th House of Heaven, at this Solar Ingress, he seems thereby to portend Death or Affliction to many Soldiers, and Martial Men in some parts of Europe, either by some contagious distemper raging amongst them, or by their own Intemperance, or by Martial Actions and Undertakings: and the Position of Venus therein too, so near unto Mars, who is Lord of the 8th House, has no propitious Signification unto those People in the World, unto whom she hath Relation: And in regard that the Sun seems afflicted by Cauda Draconis at this his said Ingress, it seems to import some Difficulties and Inconveniences to appear amongst some great Men in the World, and some Vexations occasioned by the Treachery and Deceit of some pretended Friends, which seems the more confirmed by the Position of the Sun and Cauda Draconis, in the 11th House of Heaven, at this his Entrance into Capricorn.

Astral Observations, 1704.

I do proceed and say, that all the *Middle* time of the Moon's Eclipse, and her greatest Observation, upon *Sunday* Morning, the 12th Day of *December*, 1703. (the Morning after the Sun's Ingress into *Capricorn*, as fore said) The 9th Degree of *Sagittary* appears in the *Ascendant* in our *Horizon*, and the same Degree of *Libra*, on the *Cusps* of the *Medium Celi*, the Planets then in the same *Constellations* of Heaven, as at the said Ingress; only the *Moon*, who is then removed to about the 49th Minute of *Cancer*, (wherein she is *Eclipsed*) within 28 Min. of *Caput Draconis*; the *Sun* then in the same Minute of *Capricorn*, and at the same Distance from *Cauda Draconis*. *Saturn* in the 4th House of Heaven, stationary (as fore said at the Sun's Ingress.) *Jupiter* in the 5th House retrograde (also as aforesaid.) *Mars* and *Venus* in the 12th House, the *Sun* and *Mercury* in the *Ascendant*, and the *Eclipsed Moon* in the 7th House. Thus are the *Heavenly Bodies* posited, and the *Middle* time of this Eclipse, and the then greater Observation of the Moon. 'Tis a total Eclipse, and very great, as being above 20 Digits; beginning in that part of Heaven, which we call the 8th House, proceeding from thence into the 7th House, (being that which is called by *Astrologers* the *Western Angle*) and there it ends. Yet the Moon is not seen from us there about 7 Minutes before the Eclipse is quite ended. It happens in the very Beginning of *Cancer* (as said before) viz. in the first Degree thereof, being one of the *Constellations* of the *Watery Triplexity*, and a *Tropical Sign*. In judging of the Effects of Eclipses, the *Asterism*, and Sign of Heaven, wherein the Eclipse happens, ought to be observed, and well considered, as in relation unto those parts of the World, that are under the Sign wherein the Eclipse is; because the Effects of the Eclipse may be expected to manifest themselves chiefly there. *Eclipses Luminarium maxime videntur in illas regiones, quæ sunt sub signo eclipsitico.* For the Effects of Eclipses are felt, and do most operate (according to the Judgment of most *Astrologers*) in those Regions and Places that are under the *Eclipsed Sign*. And 'tis *Ptolemy's* opinion, *Lib. 2. Cap. 8.* That they appear more effectually in such places, where they are *vertical*, or where the *Chief Significator* shall pass by their *Zenith* in the time of the Eclipse, &c. and soasmuch as *Cancer* the said Sign wherein

the Eclipse is, a Tropical and Northern Constellation; Ergo, the Effects may appear chiefly in the North and North East parts of the World: Yet seeing that the most part of the Eclipse falls in the Western Angle, as aforesaid, some of the Western parts of the World also may be concerned thereby.

Ptolemy, an ancient and learned Mathematician, writes that an Eclipse of the Moon, in the beginning, or first ten Degrees of Cancer, (as this is) *Bellum omnino concitat*; presage Wars. Indeed the Planet *Mars* has much to do in the place of this Eclipse, and in the whole watery Trigon; (as *Astrologers* tell us) and he is now at the time of this Eclipse posited in *Scorpio*, a Sign of the same Trigon, and wherein he hath great strength; but being then in the 12th House of Heaven he seems thereby not well posited: Yet, seeing he has pretty much signification, as in relation to the Effects of this Eclipse it may therefore be expected, that many Martial Actions and violent Proceedings, and things of his Nature, may appear in sundry parts of the World, during the continuance of this Eclipse's Effects, and Troubles, and Inconveniences in one kind or other in those Countries and Places that are under the aforesaid Sign, wherein this Eclipse happens, occasioned by the appearance of Armies and Soldiers, &c. The rather, because the greatest part of the Eclipse happens to be in the 7th House, as aforesaid; being that place of Heaven which relates unto Martial Transactions, as *Astrologers* affirm.

Moreover, *Junilius*, and other *Astrologians* say, that Eclipses of either of the *Luminaries* in Cancer, Scorpio, or Pisces, (being the watery Triplicity) denote Trouble and Detriment to Seamen, Watermen, and Fishermen, and such as are conversant at Sea, and upon the Waters; much wet weather also, violent Inundations, and Over-flowings of the Sea Banks in some Countries, and great Floods, doing much harm in low, fenny and marsh ground, in some places lying near the Sea, and Troubles, and great Storms and Tempests at Sea; also Mortality and Affliction to the Vulgar and common People in some Countries under the said Triplicity.

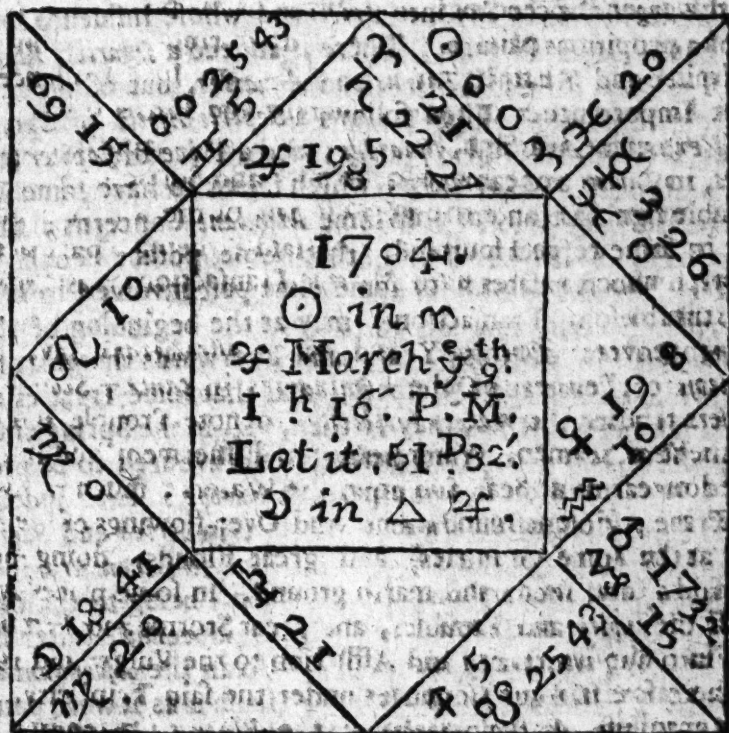

As to the Mutual Aspects of the Planets, attending the aforesaid Ingress of the Sun into Capricorn, and this Eclipse; there is only a Trine Aspect of Saturn and Mercury in Aries and

Sagi
the

A
Febr
cold,
tion
bein

Astral Observations, 1704.

Sagittary, which is of a moderate Disposition; and although the *Moon* after her *Eclipse* does next apply to a *Quartile Aspect* of *Saturn* in *Aries*, which *Aspect* is accounted to be of no pleasant Temper; yet presently after that she comes to a *Trine Aspect* of *Mars* and *Venus*, which seem to have kind and favourable significations. — The Effects of the *Eclipse* may appear in the Month of *January* and *February*, and the *Spring-time* of this Year 1704. In some places beyond the Seas, that are under *Cancer* aforesaid, (wherein the *Eclipse* happens) hereafter mentioned.

As to the Weather in the aforesaid Months of *January* and *February* this Year, 'twill be sometimes very uncertain, and cold, snowy, wet and windy. And so to proceed to the Position of Heaven, at the Sun's Ingress into *Aries*, this Year 1704. being the next thing in order to be herein considered.

Astral Observations, 1704.

The Sun having finished his course through *Capricorn*, *Aquarius* and *Pisces*, arrives at the Equinoctial Sign *Aries*, upon *Thursday* the 9th day of *March*, this Year 1704. about 16 Min. past 1 of the Clock in the Afternoon, (at which time the Spring Quarter does Astronomically begin) the 10th Degree of *Leo* being then in our Horizon on the Cusp of the Ascendant; and the 21st Degree of *Aries* on the Medium Celi, Saturn being there in the 22d Degree of *Aries*; and Jupiter in the 19 Degree of *Taurus*; Mars being in the 6th House of Heaven, in the 17th Degree of *Capricorn*; the Sun in the 9th House; Venus in the 7th, in the 19th Degree of *Aquarius*; Mercury in the 8th House, in the 3d Degree of *Pisces*; the Moon in the 3d House, in the 18th Degree of *Virgo*; Caput Draconis in the 11th, in the 25th Degree of *Gemini*; and Cauda Draconis in the same Degree of *Sagittary*, in the 5th House. The Moon being in a Trine Aspect of Jupiter.

There are some favourable Aspects of the Planets, attending this Ingress of the Sun into *Aries*; and whose Influence may be of a propitious Nature. There is indeed a Quartile Aspect of Jupiter and Venus, in *Taurus* and *Aquarius*, but of no very great Importance: Then follows a Septile Aspect of Saturn and Venus, in *Aries* and *Aquarius*; and a Trine of Jupiter and Mars, in *Taurus* and *Capricorn*; which seems to have some acceptable signification, as unto some Mundane Concerns; and may in some respect portend, that some potent People in Europe, who have been for some time past involved in War and troublesome Transactions, may at the beginning of the Spring Quarter of this Year, and afterwards therein, be desirous of Peace and Quietness; and that some Treaties or Matters tending thereto, may be then, viz. in the Spring-time of this Year, or some time before, endeavoured to be promoted or carryed on in some parts of Europe: And indeed the Trine Aspect of Saturn and Mercury, in *Aries* and *Sagittary*, at the Ingress of the Sun into *Capricorn* in December 1703. aforesaid; and Mercury's next application, being to the like Aspect of Jupiter in *Taurus*, in December aforesaid, (after he came into *Capricorn*) and his position also in the Ascendant at the then aforesaid Eclipse of the Moon, seem'd as it were partly to manifest, or denote to the World something concerning the same.

How.

Astral Observations, 1704.

However, quickly after the Benevolent Trine, and Amicable Aspect of *Mars* and *Jupiter*, at this present Ingress of the *Sun* into *Aries*, as aforesaid, we find that *Mars* comes next therefrom, to a *Quartile Aspect* of *Saturn* in *Aries*, at this Ingress posited in that part of Heaven, which is called the 10th House, and South-Angle; *Mars* being, as aforesaid, in *Capricorn*, (a Sign wherein he is exalted) in the 6th House of Heaven, (and under the Earth) in Opposition to *Cancer*, in the 12th House, (the Sign wherein the aforesaid great *Lunar Eclipse* happen'd) and in Square to *Aries* and *Libra*, the one being in the South Angle, as aforesaid, and the other in the North: All which being duly considered, seem to portend, that notwithstanding some Negotiations may appear in some places of *Europe*, at the beginning of the Spring time of this Year, or before, for the reconciling of some National Differences, and uniting of some disagreeing People in the World; yet there may arise some or many Difficulties therein, which may hinder and obstruct the peaceable Designs of some Persons managing and preferring the same; and that many considerable Martial Actions will be still on foot in many parts of the World; and Troubles and Afflictions may happen amongst many People, occasioned by War and its Attendants; and there may be some Battles, Skirmishes, and the besieging and taking of Towns, Forts, &c. beyond the Seas; and Martial proceedings of consequence, even in this Spring Quarter of this Year, and Months of *March*, *April* and *May* therein; notwithstanding the good and calm signification, as unto some Mundane Concernments, which the Trine Aspect of the *Moon* to *Jupiter*, from *Virgo* to *Taurus*, seems to have at this present Revolution of the *Sun*, as well as that before-mentioned of *Jupiter* and *Mars*, in *Taurus* and *Capricorn*.

It is to be observed, that the Planet *Mars*, at this coming of the *Sun* into *Aries*, as aforesaid, is in the very same Sign and almost Degree, wherein he was at the late great and eminent Conjunction of *Saturn* and *Jupiter*, in *May* 1702. and that his aforesaid *Quartile Aspect* from thence to *Saturn* in *Aries* (at this said Revolution of the *Sun* thither) will be the last Aspect which he will have with him there; until *Saturn* shall return thither again, which will not be until the Year

1731. or thereabouts; for Saturn is now upon his leaving of Aries, and removes from thence into Taurus in this Vernal Quarter, viz. on or about the 9th day of May this Year: Before he comes thither, Jupiter removes from thence into Gemini, which he does at the very end of April.

I do further proceed, and say, that it cannot be expected, that all the Effects of the late great Conjunction of Saturn and Jupiter in May 1702. are already expired: but that they are chiefly to operate still in the World in several Years yet to come; and some of them may appear in this Year 1704. according to the Posture of Heaven, at the aforesaid Ingress of the Sun into Aries, &c. — For indeed, seeing that the Effects of the said Conjunction, will not immediately succeed it: Therefore we ought in this, and every other succeeding Year for some time hereafter, to take notice thereof as occasion shall be offered. For we may take the Conjunction it self according to Mr. Lilly's Judgment (in writing of the Conjunction of the two Planets in 1663. in his *Merlini Anglici Ephemeris* for the Year 1664.) to be, as it were, like a Birth, which by time and order of Nature at length comes to perfection; or to perform what the great and wise God of Nature has ordained it for; and until such time as the said Planets Saturn and Jupiter shall come to an Opposition, the effects of their late Conjunction in May 1702. will be increasing, and appear at some times in the World vigorously; but sometime after their Opposition they will be declining; the more, when these two Planets shall draw nigh to their next Conjunction, which Conjunction will not be till about the Year 1722. — and till then the effects of their late Conjunction may now and then in some succeeding Years (in some kind or other) appear, and be manifested in the World.

The afore-mentioned Mr. Lilly in his *Propheticall Merline*, p. 56. writes from Avenaris thus, viz. *Conjunctio autem magna Jovis est cum Saturno, in signo Arietis, quod est, quia sunt Stella graves & tarda, & non significant super particularia, imo super communia: & quia signum Arietis est signum primum inter signa, ergo hæc conjunctio vocatur magna, &c.* that is, The Conjunction of Saturn and Jupiter is called Great, when it happens in Aries, as in May 1702. because they are ponderous Stars, and of slow Motion, and signify not common or

Astral Observations, 1704.

particular things: And because *Aries* is the first among the signs, therefore this Conjunction is called Great. — The truth is, if there be any need to be taken in the Mystery of Numbers, as some Learned Men say, then we are to take notice, that the late Conjunction of *Saturn* and *Jupiter* in *Aries*, in May 1702, as aforesaid, was their 7th return thither since the Creation of the World; and may be therefore of some mysterious concernment unto it. — Who knows but that before these two Planets, *Saturn* and *Jupiter*, shall meet again, (which will not be till the Year 1721, or 1722) the blessed Millennium so much expected by some, (or some other amazing Catastrophe) may appear in the World: For some Learned Men believe, that some of the Prophecies in the Revelations of St. John do reach far beyond our times; and that the Events of future times will unclasp and unseal a considerable portion of the Apocalypse.

But to proceed; 'tis very probable, that some of the Effects of the great Lunar Eclipse in December 1703, before mentioned, may be manifested in divers places thereby concerned, even in the Spring Quarter of this Year, which I do here treat of. Indeed Astralogs have not well agreed about the time when the Effects of an Eclipse shall begin to operate: *Ptolemy's* Judgment, and some others, that when an Eclipse shall happen to be in the West-part of Heaven (as the aforesaid Eclipse was) 'twill be long after the Eclipse, before its Effects will appear: And some have given us Rules to find out the time when an Eclipse's Effect will begin, according to their Opinion. — But the Learned *Origanus*, part. 3. de Effectibus, Cap. 2. seems to reject the Judgment of *Ptolemy*, &c. and saith, that *Eclipses* Effects inchoate at the very day of the Eclipse: For he says there, *Constat enim quod Eclipses statim operari, & effectus suos aliquandiu extendere.* — And for the time of their Duration, the Rule is this, viz, *Quot horas durat Eclipsis Solaris, tot annorum duraturos effectus prænunciat: quot horas durat Lunar, tot mensium.* How many Hours the Sun is Eclipsed, so many Years will the Effects continue; but if it be a Lunar Eclipse, so many Months. — And some Authors say, *Ex Eclipsibus magni effectus proveniunt* — From Eclipses great Events do happen.

As unto the Weather in the Spring Quarter of this Year

1704.

Astral Observations, 1704.

Upon *Saturday*, the 10th day of *June* this Year, about 42 Minutes past One of the Clock in the afternoon, the *Sun* having passed through *Aries*, *Taurus* and *Gemini*, comes to the Solstitial Sign *Cancer*; at which time the Spring Quarter ends, and the Summer Quarter does begin, according to Astronomical Account: The 18th Degree of *Libra*, or thereabouts, will be then on the Ascendant in our *Horizon*, and about the 14th Degree of *Cancer*, on the Cusps of the *Medium Cæli*; *Saturn* being in the 3d Degree of *Taurus*, in that place of Heaven, which is called the 7th House;— and *Jupiter* in almost the 10th Degree of *Gemini*, in the 9th House; and *Venus* is there too in the said Degree, being but 13 Minutes, or thereabouts, separated from the Body of *Jupiter*; *Mars* is in the 5th House, in the 17th Degree of *Pisces*; the *Sun* in the 9th House; and *Mercury* is there too (for he wants above 5 Degrees of the Cusps of the 10th) In the 18th Degree of *Cancer*, retrograde: The *Moon* is in the 4th House, in the 23d Degree of *Aquarius*; *Caput Draconis* is in the 9th House, in the 10th Degree of *Gemini*; and *Cauda Draconis* is in the 3d House, in the same Degree of *Sagittary*. The *Moon* is void of course, viz. she applies not to the Aspect of any Planet, during her abode in *Aquarius*, the Sign wherein she is at this Solstitial Ingress, as aforesaid.

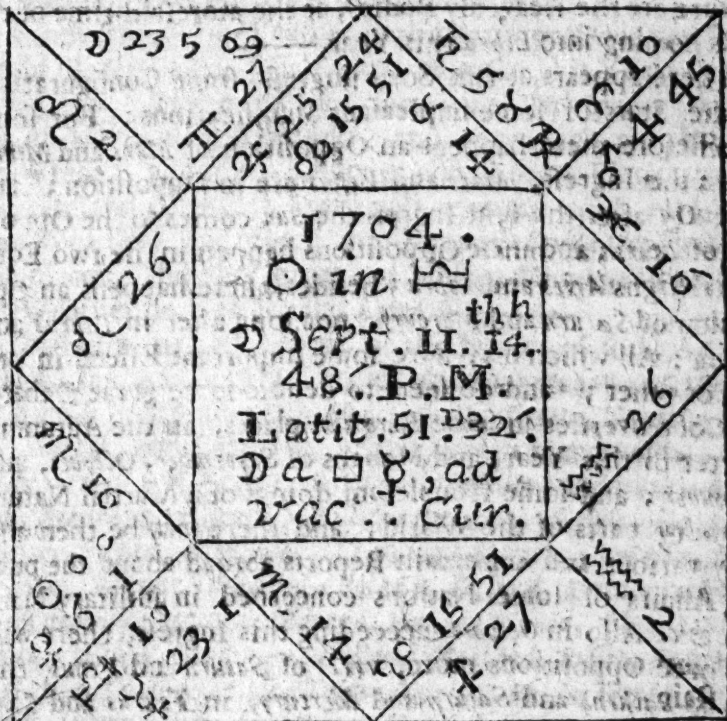

What seems chiefly to appear amongst the Celestial Bodies, to be taken notice of at this said Solar Ingress, is, that the Planet *Saturn* is removed from *Aries* into *Taurus*: about the 13th day of *March* 1702. he came into *Aries*, and has been there ever since, untill about the 9th day of *May* this present Year 1704. and now at this Ingress of the *Sun* into *Cancer*, he is come into the 3d Degree of *Taurus*, as aforesaid: But seeing he will be in *Taurus* hereafter for some time, his Influence in that Sign will appear more in the next Year 1705, &c. than in this; and as he shall make his future progress therein. Indeed, he proceeds now only to the 6th Degree of *Taurus*, and then becomes retrograde, viz. in *August* this Year, and begins then to return towards *Aries* again. Astrologers say, that when *Saturn* shall remove out of one Sign into another, there usually happens much change in the Air, and some material things in some parts of the World besides, under that Sign into which he comes. — However, at this Ingress of the
Sun

Sun into *Cancer* this Year, the Stars seem favourably disposed for there happens no violent or unkind Aspects amongst them. There is only a Conjunction of *Jupiter* and *Venus* in *Gemini*, and a Trine Aspect of *Mars* and *Mercury* in *Pisces* and *Cancer* attending the same, being of kind Significations; nor are there any Aspects of the Stars of consequence succeeding it. Therefore in regard that the Heavenly Bodies at this Ingress of the *Sun*, are so well disposed, as touching their mutual Aspects (which are most to be relied upon at every *Solar* Ingress) the Actions and Proceedings in the World in the Summer Quarter of this Year, may not appear of that great Importance, as at some time before might have been expected, and some People in *Europe* may be therein much inclined to Peace and Quietness: Notwithstanding, where Armies shall be, some very material Action may now and then happen in this Summer Quarter; and there may be some great Martial doings both at Sea and Land therein; and some great and various Transactions may be then on foot in some foreign Countries and places.

As unto the Weather in this Summer Quarter, and Months of *June*, *July* and *August* this Year, it may be pretty moderate and seasonable for the most part, for ought I can discover, tho' there will be in *June*, some time after the *Sun's* Ingress into *Cancer*, some very sudden and hasty Storms, of Hail and Rain in many places; and also sometimes in *July* and *August* too; with some Thunder and Lightning also; but it may be hoped that no such Floods will happen, as in *June* the last year, but somewhat better weather: For the then unseasonableness of the weather proved very prejudicial to Corn and Grass, then upon the Ground in many places, to the detriment of the industrious Farmer, especially in his Crop of Barley, as 'tis sufficiently known: And indeed the great Flood on Sunday the 13th of *June* did very much Harm generally in many places—and not only here in *England*, but in many parts beyond the Seas too; there happened very much wet and unseasonable weather likewise, at, or about the beginning of the Summer Quarter in 1703.—The Truth is, there appeared then many unpropitious Aspects of the Stars, as in relation unto the constitution of the weather, as I hinted in my last year's *Astral Observations*.—But become now

Astral Observations, 1704.

to the Ingress of the Sun into *Libra* this present Year, being the last So^r ar Ingress to be herein considered

On *Tuesday* the 12th day of *September* this Year, about 48 Minutes past 2 of the Clock in the Morning, the *Sun* having gone through *Cancer*, *Leo*, and *Virgo*, comes in the Equinoctial Sign *Libra*; at which time the Summer Quarter ends, and the Autumnal Quarter does Astronomically begin, about the 26th Degree of *Leo*, being then in the Ascendant in our Horizon; and about the 14th Degree of *Taurus*, on the Cusps of the *Medium Caeli*: *Saturn* being in the 9th House of Heaven, in the 5th Degree of *Taurus* retrograde: *Jupiter* in the 11th House, in the 29th Degree of *Gemini*: *Mars* in the 8th, in 4 Degrees of *Aries*: The *Sun* in the 12th House: *Venus* in the 1d, in the 6th Degree of *Libra*: And *Mercury* is there too in the 23d Degree: The *Moon* is in the 11th House;

Astral Observations, 1704.

House, in the 23d Degree of *Cancer*: *Caput Draconis* is in the 10th, in the 15th Degree of *Gemini*; and *Cauda Draconis* is in the 4th House, in the same Degree of *Sagittary*. In this Posture are the Heavenly Bodies, at the aforesaid time of the *Sun's* coming into *Libra* this Year, —

There appears at this Solar Ingress some Configurations of the Stars of some unpleasant Significations: For some time before there happens an Opposition of *Mars* and *Mercury*, at the Ingress, *Mars* and *Venus* are in Opposition; and presently after the said Ingress the *Sun* comes to the Opposition of *Mars*; and these Oppositions happen in the two Equinoctial Signs *Aries* and *Libra*; besides, there happens an Opposition of *Saturn* and *Mercury*, not long after in *Taurus* and *Scorpio*: All which may have some important Effects in one kind or other; and do seem to denote some great Debates and Controversies in some *European* places, in the Autumnal Quarter of this Year, and Months of *September*, *October*, and *November*; and some troublefom doings of a Martial Nature in sundry parts of the World; and there may be then also many various and uncertain Reports abroad about the publick Affairs of some Nations concerned in Military Matters, &c. Also in *October* succeeding this Ingress, there will be Three Oppositions more, viz. of *Saturn* and *Venus*, the *Sun* and *Saturn*, and *Saturn* and *Mercury*, in *Taurus* and *Scorpio* (*Mercury* being then retrograde) which seems to import, that in this Autumnal Quarter there will be some considerable Difficulties and Inconveniences in some Mundane Affairs, and some great and various Transactions, and some unkind Disputes and Animosities amongst some People, relating unto National Concernments in those parts of the World, that are under the before-mentioned Constellations of Heaven wherein these Oppositions happen. —

There's in this Quarter, viz. on the last day of *November*, an *Eclipse* of the *Moon*, which will be visible in our Horizon, (if the Clouds hinder not, as I suppose they may) of which you have an Account in the said Month's Observations, and the Type thereof, unto which I refer you. Its Effects, tho' of no very great Importance, may be manifested at the beginning of the next Year 1705. Indeed, there will be 3 *Eclipses* more in this Year, viz. 2 of the *Sun*, and

Astral Observations 1704.

and 1 of the Moon, but they will be visible in our Horizon. I have given you some Account of them in the Observations on the Months wherein they happen, and therefore shall not mention them any further here.

As concerning the Weather in this Autumnal Quarter, and Months of September, October, and November this Yeas, 'twill be thus, viz. There will be sometimes very great Storms of Rain and Hail in September, and very high and turbulent Winds; and some Thunder also in some Places; and in October and November there will be much cold, wet and leery Weather, and there may be much Snow too then in some places, and very great and violent Winds and boisterous Weather both at Sea and Land.

I shall now give an Account of the Names of those Countries, Cities and Towns, which Astrologers say are under the Zodiac here following, viz. Aries, Taurus, Cancer, Libra, Scorpio, and Capricorn, before herein mentioned. Under Aries are France, Germany, Sweden, Denmark, England, Silesia the Higher, Polonia the less, Capua, Ferrara, Florence, Padua, Brunswick, Cracovia, Utrecht, Marcell, Naples, &c. Under Taurus—Poland, Ireland, Iorrain, Helvetia, Franconia, Bononia, Mantua, Parma, Nantz, Lipsig, Sittich, &c. Under Cancer—Holland, Zealand, Russia, Scotland, Burgundia, Constantinople, Tunis, Venice, Milan, Genoa, Magdeburg, Wittenburgh, Amsterdam, York, Andrews, Algier, Prussia, Cadix, &c. Under Libra—Austria, Livonia, Alsatia, Lisbon in Portugal, Arles, Friburg, Vienna in Austria, Antwerp, Spire, Landau, Franckford upon Maine, the Dukedom of Savy, Portugal, &c. Under Scorpio—Norway, Bavaria the Upper, Catalonia, and Valentia in Spain, Vienna in France, Franckford upon Odar, &c. Under Capricorn—The South-West part of Saxony, the West Indies, the Isles of Orchades, Mecklin, Clevis, Gaunt, Vilna, Oxford, Brandenburg, Moscow, Lithuania, Berga, &c. These be the Principal Countries, Cities, and Towns, according to the Judgment of Astrologers, that are under the Six aforesaid Parts of Heaven, called Signs. But some say, that the North part of Swedland, Russia, and Switzerland are under Taurus aforesaid. However, this is the best Account that Ancient and Modern Astrologers have given concerning the Countries and Places in the World,

Astral Observations, 1702.

World, that are under the aforesaid Zodiacal Signs and Constellations of Heaven.

May England prosper, and be Victorious; and may the Blessings of Almighty God attend our most Gracious Sovereign Queen ANNE now and evermore.

WILLIAM ANDREWS
